Chapter 2. Weather and Climate The Structure of the Atmosphere Surrounding the Earth is a gaseous envelope or atmosphere, held in place by the planet's gravitational attraction. The Earth's atmosphere is a complex dynamical, physical, and chemical system. Dynamic processes cover a large range of scales from the microscopic-scale dynamics of evaporation, condensation, cloud formation and ...

## **Chapter 2. Weather and Climate - NASA**

changes in weather and climate. Weather is the temperature, wind and precipitation (rain, hail, sleet and snow) that we experience every day. Weather systems are constantly circulating within the Earth's atmosphere so what you see today may be different tomorrow. An approximate 23° tilt in the Earth's axis also causes the atmospheric circulation cells to shift and the seasons to change ...

Climate can thus be viewed as a synthesis or aggregate of weather. This implies that the portrayal of the climate in a particular region must contain an analysis of mean conditions, of the seasonal cycle, of the probability of extremes such as severe frost and storms, etc. Following the World Meteorological Organisation (WMO), 30 years is the classical period for performing the statistics used ...

The purpose of the Weather Guide is to: ! Provide answers to common questions ! Describe the organization,

the people, and functions of the NWS - San Diego ! Explain NWS products ! Describe specific challenges local NWS forecasters face in producing accurate forecasts ! Create a better general understanding of the particular weather and climate of our region ! Provide numerous resources for ...

### **The Weather Guide**

A simple answer to this question is "climate is what you expect, weather is what you get." [1] Both weather and climate refer to local conditions (temperature, rainfall, wind strength, etc.) in a particular location or region, but the main difference between them is a matter of time.
